On promotion at our stand

Straight-line edging machines have always represented the core-business of **Adelio Lattuada**, leading us to develop a range which is now the widest on the market.

At the fair, among others, we will have on show two particularly interesting models: a **TL 11 AV C** and a **TLR 13 AV C**.

The TL 11 AV C can be defined as the top-model of our TL series, which has been completely renovated and enriched, with innovative features such as:

- possibility to process **thicknesses up to 50 mm**.
- automatic device to support the operator when processing **parallelogram-shaped glasses in an inclined position**.
- **machine data and maintenance panel** with which it is possible to manage the following functions: meter counter, machine operations statistics, maintenance operations warnings, machine alarms, automatic oil pump.
- **pneumatic clutch** on the inlet conveyor to facilitate glass loading.
- **oil system with end-of-the-line pressure sensor**: a further safety feature in order to guarantee continuous perfect functions of the fundamental lubrication system.

TL 11 AV C

- **torque limiter** in order to allow the two conveyors to work perfectly in-line and therefore increase their lifetime.

The TLR 13 AV C on the other hand, in addition to the above-mentioned features, will also be equipped with:

- **washing machine OT 300** on the outlet conveyor to achieve complete cleaning and drying of the processed edges of the glass sheets.
- management of speed and transport by means of **moto-reducers with inverter**.
- **front regulation of the diamond and polishing spindles for the rear arris**: the aim is always to help the operator who will have the possibility to save precious time when regulating the two arris wheel spindles, no longer being obliged to perform this operation from the rear of the machine.

- **glass presence reading sensor with ultrasounds**: guaranteed resistance, long working life, precision and total insensitivity to water and dirt.
- **highly efficient motors** (EFF1-IE2 standard): we have, since 2009, been offering the possibility to mount these motors on our machines, anticipating, in this way, the future European rules which will oblige their use in the next few years.

TLR 13 AV C

Range of products

- **Electronic or with PC straight-line edging machines for flat edge or with variable angle**
- **Double-edgers**
- **Electronic or with PC straight-line bevelling machines**
- **Automatic corner-grinding machines**
- **Vertical washing machines**
