SPEED EDGE **Innovative follow-glass system**

VERTICAL COMPACT SYSTEM - THE GRINDING HEAD FOLLOWS THE GLASS SHEETS

ROUGH GRINDING AND POLISHING
ROUND AND FLAT EDGES
REMOVAL OF COATING
ARRISING
MILLING

Compact vertical numerical control machine to perform rough grinding or polishing, flat or round edges, arrising, milling and removal of coating from low-E glass.

Ideal to work in-line, with drilling lines, or as stand-alone machines

Modular Line

VERTICAL LINE **Automatic compact vertical line** **with high productivity**

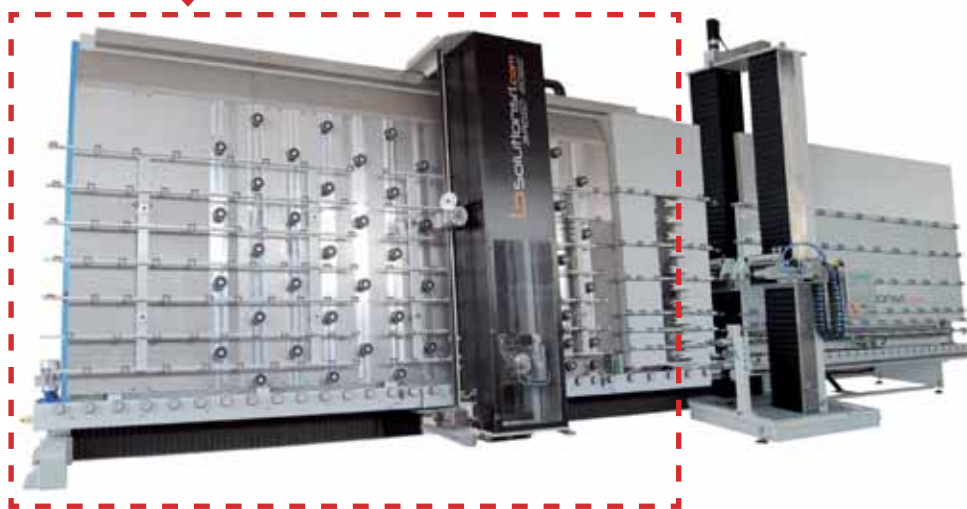

ROUGH GRINDING AND POLISHING,
FLAT OR ROUND EDGES, ARRISING, REMOVAL OF COATING
FROM LOW-E GLASS, MILLING AND DRILLING

The modular and selectional vision of the line, with grinding and drilling stations, projects the needs to have flexible and interchangeable machines responding to a constantly evolving market.

The innovative follow-glass system is the grinding head which follows the glass sheets anchored by means of suction cups which guarantees maximum performance without vibrations.

The **full electronic control** of the drilling heads and positioning guarantees the highest precision of the distances and of drilling depth.

The **compact system** integrates loading and unloading in a single solution, thus saving space.
